

An Educational Trail

(From the desk of Environment Club)

REPORT

Under the aegis of Environment Club, a team of forty students visited the neighbouring society of Sector 20 on 21 August 2017 during the club period to gain awareness regarding some rare birds and look at an ecologically sound garden arena.

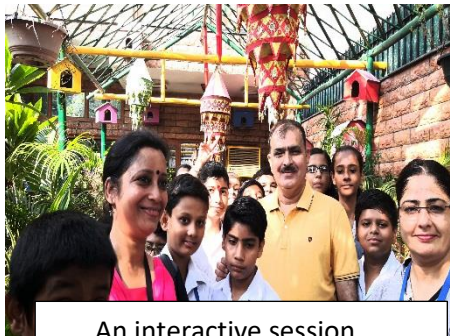

Dr.P.K.Bhatt, the brain behind the idea of developing an ecologically balanced garden, briefed the children about few rare birds like Java, Cocktail, Assel hen, White pigeons, Ducks, Blue bird etc. Students ardently asked Dr. Bhatt various questions pertaining to the maintenance and feeding of rare birds. Students were also curious to know about the idea that pushed him to build this arena. He replied saying that it is just a small little effort which he could do to give something back to Earth. Dr..Bhatt sensitized children to take small steps which need to be taken time to time to bring back the lost ecological balance on planet. He emphasized that each one is a green ambassador hence needs to get involved, act to bring back a balanced ecosystem which can overcome the climate change that is affecting our planet. His efforts were cherished by both students as well as by escort teachers. The purpose of this visit was fulfilled to help children raise awareness related to rare birds. It provided an ingenious and interactive way to experience nature.
