

BAL SABHA ACTIVITY REPORT (2021-22)

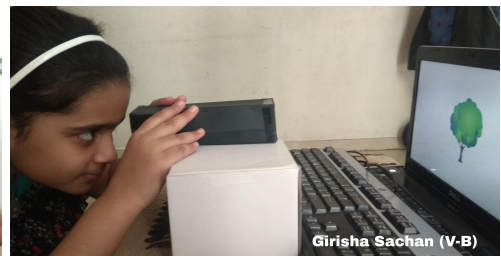

PEEK-A-BOO: PINHOLE CAMERA MAKING

CLASSES: IV-V

“When you look at the stars and the galaxy, you feel that you are not just from any particular piece of land, but from the solar system.”

-Kalpana Chawla

The young learners of class IV and V took a trip to the exciting world of science experiment and model making through the Peek-a-Boo: Pinhole camera Making Activity. The vibrant minds came up with different kinds of working models for making a pinhole camera and observed their experiment with their own eyes. In the digitized world, this was their own short trip to an important point in history that gave rise to the modern imaging technology today. The students also got to witness the theory of rectilinear motion of light in action, paving the way for further learning. Sharing with you few glimpse of the wonderful work :

This activity not only helped instill scientific temperament as well as develop a knack of exploration in the learners.

Teacher In Charge:

Ms. Yasha Sharma
