Thank you for creating such a fun and educational environment for parents and children. I really appreciate your effort to encourage the children and parents to participate in activities which can affect the fate of the Earth. We learnt how can we use waste material to make something creative "Deck up my Doll" activity is one of the example where you pushed children and parents to use the waste material to make a doll and educating children more about our Indian diverse culture where they are not only reading about the different state culture rather they are learning by animating it.
