

REPORT
BAL SABHA ACTIVITY (2023-24)
POPULATION DENSITY OF CONTINENTS

Date: 12.07.2023

Classes: III - V

Theme: World Population Day

“Overconsumption and overpopulation underlie every environmental problem we face today”
- By Jacques Yves Cousteau

World Population day was first observed in 1989 by the UN to educate the people and tackle the problem of expanding population. It is an important event to empower young generation by educating them about why population is a raising issue and problem faced by environment because of it.

Therefore the activity, Population density of continents was conducted in classes III-V to observe World Population Day. It started with discussion of different continents of the world, their names, their location on the world map. The students enjoyed the discussion and were able to identify India as a part of Asian continent.

Students exploring different Continents

Later, A data related to Population density of different continents was shared with students.

Students tried to analyze the data and represented it with the help of bindis, stickers, different shapes' cut-outs etc. on the world map. This helped in enhancing their critical thinking and decision-making abilities.

Keep the ball rolling

The students were happy to learn about world population day and were sensitized on the importance of controlling population. Students were made aware of the sensitive issue of population and thus, the learning outcomes of the activity were achieved with the hope of bringing necessary changes in the society.

Students unveiling their creativity
